

National Severe Weather Warning Service

Chief Forecasters Assessment

A large, vigorous area of low pressure is expected to move northeastwards, passing just to the north of Scotland on Monday. This will bring a swathe of very strong west or southwesterly winds across much of the UK.

This warning has been updated to reduce the southward extent of disruptive winds across the UK, and to extend the validity time further into Tuesday morning,

The Met Office have issued a **Yellow Warning of Wind**

Valid from **09:00 on Mon, 01st Feb 2016** until **09:00 on Tue, 02nd Feb 2016**

Southwesterly gales will begin to develop widely across northern parts of the UK during Monday, increasing further to bring locally severe gales and storm force westerly winds by Monday night before easing on Tuesday morning. Gusts of 60 to 70 mph are likely quite widely. Much of Scotland is covered by an associated amber wind warning, where winds will be stronger still and there is a risk of higher levels of disruption.

Please be aware of the risk of disruption to transport as well as power supplies, with some structural damage also possible.
